

Cipangopaludina chinensis

Chinese Mystery Snail

Invasive to Maine

Freshwater
Ponds and Lakes

Shell Aperture (Opening)

Vital Signs user Tree Huggers, Jordan-Small MS

Look for an operculum (trap door) that allows the snail to close the opening in their shell if water conditions are poor. The operculum is dark, solid, and has concentric rings.

Full View

VS users Jillnetics (Biddeford HS) & PeaksFellow12

Look for a large (up to 7 cm) snail with chipping and weathering on the top whorl of the shell. The outer lip is rounded and black.

SHELL PARTS AND CHARACTERISTICS

Shell Spire (Spiraled End)

Vital Signs user IndNewtonGreen

Look for a snail with a shell that is smooth and strong. The shell can have 6 to 7 whorls, which are strongly convex (bulging) and very indented. The snail has a long spire

Color Variations

Vital Signs user Kchambers, Oxford Hills MS

The Chinese mystery snail is uniform in color, usually a light to dark olive-green. This snail does not have any color banding.

Similar Species

The brown mystery snail is similar to the Chinese mystery snail. The snails are both greenish, large, and have operculums. Differences between the snails include that the brown mystery snail is smaller and narrower than the Chinese mystery snail.

Did You Know?

The female mystery snail gives birth to live crawling young. This means it may only take one impregnated snail to start a new population.
